

# Dancel Cyber Defense

BY DANCEL INNOVATION GROUP · DEFENSIVE CYBER INTEGRATOR

We select, integrate and operate defensive cyber solutions for government, security and intelligence organizations, critical infrastructure and private-sector enterprises, including banks.

35+

Countries we operate in

15+

Years in defensive cyber

Dozens

Active government and private clients

## CAPABILITIES: WHAT WE DO

**Govern** Strategy, risk and compliance

**Identify** Assets, exposure and adversaries

**Protect** Architecture and hardening

**Detect** Security operations and hunting

**Respond** Incident response and forensics

**Recover** Resilience and continuity

## SECTORS: FOR WHOM

**Government and public sector** Ministries, agencies and municipalities protecting citizen services and sensitive records.

**Defense and security** Command, communications and deployed systems that must work under attack.

**Intelligence** Collection, analysis and data environments under strict compartmentalization.

**Critical infrastructure** Electric utilities, energy, water, transport, ports, aviation and telecom, where an outage is a public-safety event.

**Banks and private sector** Banks, financial institutions, healthcare and industrial companies defending customers, operations and reputation.

## WHO WE ARE

Our partners and team come from a range of relevant fields, including intelligence organizations, and the company brings more than 15 years in defensive cyber.

They include offensive and defensive cyber experts, vulnerability researchers, CISOs and other senior practitioners, so every engagement is led by people who have attacked, defended and answered for the outcome.

## SOLUTIONS: WITH WHAT

### Cyber asset visibility and policy enforcement

Know everything you own.

---

### Exposure management across IT, OT, IoT and medical devices

See the whole attack surface.

---

### Cyber risk quantification

Put a number on the risk.

---

### Continuous offensive security

Attack yourself before someone else does.

---

### AI Authorized APDDoS attack simulation

Find your breaking point before an attacker does.

---

### Cloud and AI security

Protect what runs, as it runs.

---

### AI-driven security operations

Machine-speed triage, human-governed decisions.

---

### Securing AI models, applications and agents

Adopt AI without opening a new door.

---

### AI-era application protection at the edge

Secure what you expose, to people and to AI agents.

---

### Secure remote access for OT and ICS

Let the right people in, and no one else.

---

### Cloud configuration disaster recovery

Recover how your cloud was built, not only your data.

---

## HOW WE DELIVER

**Selected for your mission** We are not tied to a single vendor. Technology is chosen because it fits your environment, classification level and operating model.

---

**Integrated, not installed** Each solution is connected to your existing tools, identity and processes so that it produces decisions, not another console.

---

**Operated with you** Run by us, alongside your team, or handed over after training. Your choice, in writing, before work begins.

---

## CONFIDENTIALITY

Many of our clients cannot discuss their work, and we do not discuss it either. Engagements run on strict need-to-know, with data handling and confidentiality terms agreed in writing before work begins.

## STANDARDS WE ALIGN WITH

NIST CSF 2.0 · MITRE ATT&CK · Zero Trust (NIST SP 800-207) · ISO/IEC 27001 · IEC 62443
